

Panels for InterAction

The intranet integration solution for LexisNexis® InterAction®

What does Panels for InterAction do?

Panels for InterAction provides a simple solution to requirements for incorporating live information from InterAction into your intranet or other internal platforms.

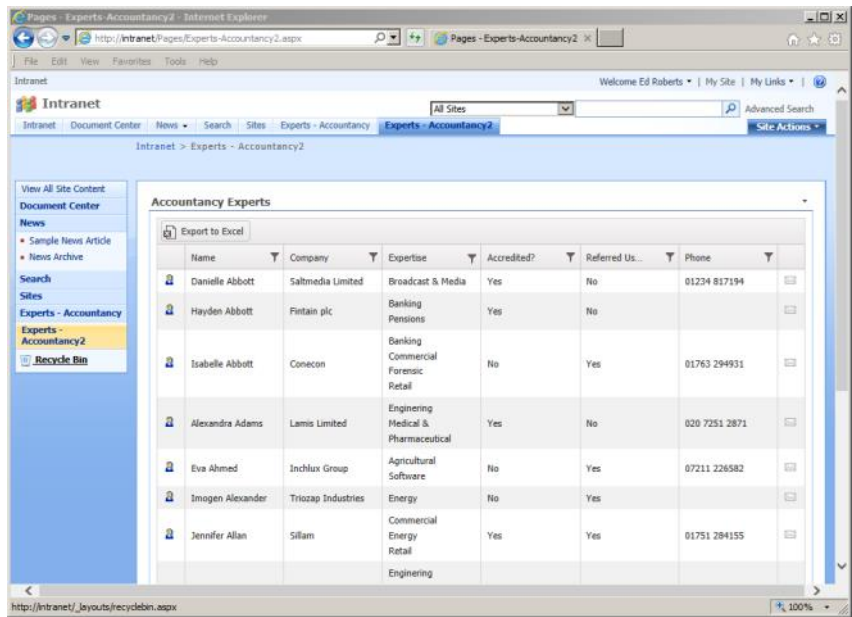

Its flexible design means it can deliver InterAction content in any web format with static or dynamic layouts in whichever way you need.

By making it simple for you to provide professional users with information from InterAction in other contexts and from other internal applications, you can extract maximum value from your InterAction data and increase user engagement.

What kinds of information can be accessed?

Any contact, list, activity, relationship or project information from InterAction can be delivered by Panels. Typical examples are:

- Contacts from any folder or set of folders, including additional field information.
- Activities from any contact or set of contacts, or of specific types
- Relationship information such as Knows relationships for a company or set of companies

Above, Panels is delivering a customised view of a set of experts held in InterAction into a SharePoint intranet page. The grid supports sorting, filtering and export.

- Information on opportunities, matters or engagements for any contact or set of contacts
- A user's My Contacts collection
- A user's My Alerts activities

How can information be presented?

You have complete control of how information from InterAction is formatted.

You can deliver content as simple lists, tables or complete pages, or as dynamic grids with advanced functionality such as filtering and export.

You can even present content as charts or translate into other web formats such as RSS or JSON for specialist integration with other systems.

What about implementation?

Panels for InterAction requires no additional hardware and is very quick to implement with minimal IT resource needed.

Generating content page URLs is simple and quick thanks to the browser based management interface.

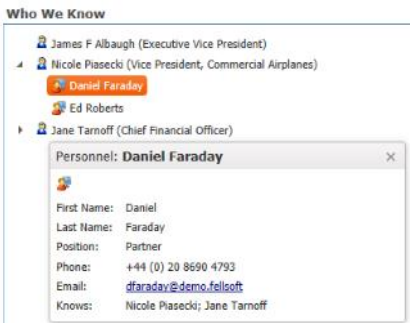

Layout and formatting changes can be made without requiring IT resource.

What versions of InterAction are supported?

Panels for InterAction works with all currently supported versions of InterAction up to and including v6.2.

How is it licensed?

Panels for InterAction is available on a straightforward and flexible annual subscription basis.

Fellsoft Limited is a Solution Partner for LexisNexis® InterAction®. For the latest information about our products or to arrange a demonstration, visit us on the web or contact Simon Ellison-Bunce:
